Professional Summary

Python Backend Developer with hands-on experience building and maintaining production-grade backend systems and AI-powered applications. Currently working at Algonox on enterprise healthcare and banking AI platforms including Medusind AI, HDFC Banking AI, and Sweet Hello – an AI voice assistant for hospital call automation. Proficient in REST API development, OCR-based document extraction pipelines, voice AI integration using ElevenLabs, and deploying scalable services with Docker. Skilled in backend architecture, SQL optimization, debugging production systems, and delivering reliable, scalable solutions.

Technical Skills

Languages: Python, JavaScript, SQL

Backend Development: REST APIs, API Integration, Backend Services, Data Processing, System Integration

Databases: MySQL, MongoDB, Firebase, Firestore

Tools & Platforms: Docker, Git, GitHub, Postman, VS Code

Technologies: OCR Processing, Voice AI Integration (ElevenLabs), Machine Learning Support, Data Validation, Production Debugging

Professional Experience

Software Developer – Backend (Python) | July 2025 – August 2026

Algonox

Medusind AI – Healthcare AI Platform

- Architected OCR-based pipelines to extract structured data from medical forms and healthcare documents
- Processed and validated large volumes of healthcare documents with high accuracy
- Engineered REST APIs to integrate AI extraction systems with backend services
- Designed data validation and cleanup scripts to enhance data quality
- Optimized SQL queries for faster data retrieval and performance
- Containerized backend services using Docker for consistent deployment
- Resolved production issues to strengthen system reliability

HDFC Banking AI – Document Extraction and ML Training Platform

- Created backend pipelines to extract structured data from banking documents
- Prepared and validated datasets for machine learning model training
- Constructed REST APIs to integrate ML extraction outputs with backend systems
- Implemented data preprocessing and validation logic to boost ML accuracy
- Troubleshot backend performance issues in development and UAT environments
- Enhanced overall system reliability and backend performance

Sweet Hello – AI Voice Assistant for Hospitals

- Built backend APIs using Python for AI-powered hospital voice assistant system
- Integrated ElevenLabs voice AI for automated patient call interaction
- Established call flow logic to assist patients with appointment and service selection
- Deployed containerized applications using Docker for scalable infrastructure
- Programmed backend logic to handle real-time voice interaction and system integration
- Reduced hospital waiting time by automating patient call assistance
- Elevated patient experience through AI-based voice automation

Projects

Hate Speech Detection using NLP (Twitter Data) | Python, NLP, Machine Learning

- Constructed text classification system to detect hate and offensive speech from Twitter posts

- Preprocessed large dataset using tokenization, stopword removal, and text cleaning
- Applied TF-IDF and machine learning models for classification
- Achieved high accuracy in detecting harmful content

Coffee Hub – Firebase Web Application | HTML, CSS, JavaScript, Firebase

- Launched responsive web platform with user authentication and real-time database
- Incorporated user features including reviews and favorites
- Ensured responsive design and smooth performance

Internship Experience

Python Development Intern | PrepInsta

- Authored Python scripts for automation and data processing
- Practiced backend logic, file handling, and OOP concepts
- Crafted mini applications to strengthen backend development skills

Education

Bachelor of Technology – Computer Science & Engineering | CGPA: 7.35/10
Kakinada Institute of Engineering and Technology
